

# Wheel Chocks Training Overview

Easy to handle with the lightweight construction and ergonomic design.

Reduced chance of ejection by incorporating the “Toe” design and using construction materials with low resilience.

High traction skin eliminates the need for bolt on feet making the chock safer and maintenance free. Instruction plaque will remain legible for the life of the chock.

Chemical and solvent resistant in a typical workshop environment.

Tough, Hi Vis, flexible skin.

Sacrificial handle prevents damage to the chock if it's abused.

Quality guaranteed with every batch being compression tested and identified for tractability. Every chock design is extensively field tested.

Designed and manufactured in Australia to meet stringent safety regulations.
